Profile Summary

Enthusiastic Computer Science undergraduate with a strong foundation in software development, data structures, and web technologies. Proficient in Python, Java, JavaScript and GitHub, with hands-on experience building AI-powered and full-stack web applications. Passionate about solving real-world problems through scalable, efficient, and user-centric software solutions while continuously expanding technical expertise.

Education

SASTRA Deemed to be University **2027**

B.Tech in Computer Science and Engineering

CGPA: 9.28

Sri Chaitanya Junior College **2023**

Class XII

97.6%

Montessori Elite School **2021**

Class X

99.8%

Technical Skills

Programming Languages Python, Java, JavaScript, SQL

Frontend HTML, CSS

Tools & Platforms GitHub, n8n, vercel, antigravity

Projects

EduGenie: AI-Powered Learning & Exam Preparation Platform  GitHub

- Built a responsive web application using **React.js** and **JavaScript**, focusing on smooth navigation and a clean, dark-mode design that works perfectly on both computers and mobile phones.
- Created an automated system where the frontend sends user requests to an **n8n** backend, which uses the **Gemini API** to instantly generate study notes, quizzes, and flashcards.
- Hosted the application's backend infrastructure on **AWS EC2**, optimizing it to handle continuous user requests smoothly.

LexiGuard: Full-Stack AI Legal Tech Platform  GitHub

- Developed an intuitive **React** and **JavaScript** interface featuring seamless drag-and-drop file uploads and dynamic, cleanly formatted AI responses.
- Used **pdfjs-dist** for browser-side PDF text extraction to prevent server crashes, feeding directly into an automated AI workflow that routes user requests to specialized models for **identifying hidden risks, answering specific questions, or summarizing text**.
- Programmed a custom retry system in the frontend that will automatically try up to 20 times to get a response from the backend, ensuring a reliable connection between **Vercel** and **AWS EC2** server.
